

A third-party **supplier audit** increases your ability to deliver an outstanding service and provides a high level of assurance that your organisation and customer information is secure.

Why perform a supplier audit?

Third party suppliers can provide cyber criminals with easy access to your organisation's data and network. If the security of your suppliers isn't validated, then you could potentially be leaving a door to your organisation wide open. Supplier audits are a vital tool for identifying, eliminating and preventing the security risks your suppliers may pose to your organisation's ongoing security and availability of critical business information.

Benefits

Verify

Verify suppliers' security controls save time, through outsourcing labour, intensive audit and analysis of multiple suppliers.

Improve

Opportunity to improve terms for better security control – including breach notification.

Enforce

Enforce remediation on discovered gaps.

What does a supplier audit cover?

Supplier audits can cover aspects relating to topics including but not limited to:

Information security governance

Supplier relationship breach

Business continuity management

Asset management

Access control

Physical and environmental security
