

# Virtual security management

Kindus **vSM** is a cost-effective cybersecurity solution that provides businesses with access to seasoned security experts on a monthly basis. It also offers a virtual security team to assist with specialised challenges, including technical implementation support for different platforms and technologies.

## Key features

### Cyber Security Leadership and Governance

Experienced cyber strategy, industry insight and big-picture thinking, whenever you need it.

### Risk Lifecycle Management

Complete ownership and management of your cyber security risks and threat landscape.

### Incident Response Planning

Help preparing for, dealing with and recovering from a variety of cyber incidents.

### Technical Implementations and Challenges

Technical expertise, whatever the challenge from vendor selection to system and network configuration.

### Compliance Management

Manage the burden that various compliance frameworks place on your cyber security.

### Security Processes and Procedure Development

Good security needs a strong foundation in policy, tailored to meet your organisation's needs.

### Operational and Project Based Guidance

Help with business-as-usual security tasks and specialist project-based engagements.

### Audit Support

Planning and support through internal and external audits.

### Training and Awareness

Help support your staff's security mindset with up-to-date tailored awareness and training.

## Built around you

To be effective, **vSM** must harmonise with your business's needs. **Kindus** offers tailored packages for precise Cyber Security assistance when you need it.
